EMERGENCY MEDICINE

Join the first of its kind global meeting that convenes emergency care leaders and key stakeholders from multiple sectors to address the gap between a global mandate—to improve the delivery of integrated emergency care—and implementation. Representatives from the World Health Organization, non-governmental and governmental organizations, academia, and health care will look at the need for an “emergency care implementation force” to translate policies and programs into effective implementation and action.

Course objectives:

1. Learn to translate and implement policies and programs for your country's integrated emergency care delivery system
2. Define principles, priorities, and next steps to implement and advance emergency care regionally, nationally, and locally
3. Describe best practices that outline partnerships between partners and stakeholders
4. Contribute to the inaugural white paper about the conference's reports and findings
